

# DENTAL SURGEONS.

DR. FRANK A. HUET,

Licentiate in Dental Surgery of the **Royal College of Surgeons, Ireland,**

And late Consulting Dental Surgeon and Lecturer on Dental Mechanics to the **Manchester Dental Hospital, England;**

AND

MR. FRED. A. HUET,

Late House Surgeon and Demonstrator in Gold Fillings to the **National Dental Hospital, London,**

MAY BE CONSULTED, DAILY, AT THEIR ROOMS,

**OAKDEN CHAMBERS, QUEEN STREET,**

**BRISBANE.**

(NEXT DOOR TO MESSRS. STEWART & HEMMANT.)

**HOURS: FROM 9 a.m. to 5 p.m. DAILY.**

N.B.—Neither the Doctor nor Mr. Fred. A. Huet have practised in either of the Australian Colonies prior to their arrival, 16th February, 1890. For late appointments, qualifications, &c., see "British Medical Directory" for 1890, page 1599.

## GAS BILLS REDUCED between 25 to 40 per cent.

Or 40 to 200 per cent. per annum on the outlay.

### THE "ACME" GAS REGULATOR.

Fixed about a foot above the Consumer's side of gas meter, prevents the breakage of Argand and other valuable Shades and Globes; prevents the burners hissing, roaring and flickering; keeps the room much cooler, as they do not allow the partially consumed gas to vitiate the air, injuring health, damaging trade stocks, pictures, blackening ceiling, &c., &c. Prices:—5 lights, 31/6; 10 lights, 55/-; 20 lights, 75/-; 50 lights, £5; 100 lights, £8; fixed to purchaser's premises, regulated, and left in perfect working order.

Up to February, 1887, 257,000 fixed in London alone, and 457,000 fixed in Great Britain.

English Testimonials upon application.

### A FEW COLONIAL TESTIMONIALS.

Alderman John A. Clarke, J.P., writes:—"Your regulator has reduced my gas bill 30 per cent. without any perceptible diminution of light."

Mr. Walter Macfarlane, Empire Hotel, Fortitude Valley, writes:—"It not only reduced my gas 25 per cent. but in regulating the gas at the meter as the governor does, prevents the breaking of gas globes, which is a great consideration in a large establishment."

Mr. John Greaves, of the Australian Hotel, Queen Street, Brisbane:—"Your Gas Regulator has reduced my gas account more than 25 per cent. and I quite endorse what Mr. Macfarlane states."

Mr. E. Everingham, Manager Metropolitan Tramway Co., writes:—"The three Gas Governors you supplied this company with, have given great satisfaction reducing our gas bills fully 25 per cent."

Sub-Inspector Graham states:—"The Gas Regulator fixed on to the Police Barracks, Roma Street, reduced the account 30 per cent."

Mr. E. A. Hardaker, Manager Royal Bank, Rockhampton, writes:—"2/8/89. Estimate Gas Governor saved 50 per cent. in June, 1889, and giving every satisfaction now."

Undeniable proof of the necessity of having Gas controlled by the ACME REGULATOR is the fact that every foot of Gas consumed by the Gas Companies themselves is controlled by REGULATORS, and nearly all the street lamps in London and Brisbane are fitted with them.

The Regulators are easily fixed. Instructions for fixing accompanies each one.

# ABRAHAM'S PILLS.

## THE GREAT LIVER REMEDY.

**P**REPARED from Dandelion, and free from all Noxious Drugs, viz:—Podophyllin, Calomel, Blue Pill, Mercury, or Drastic Purgatives.

This now celebrated PILL has by success, proved beyond doubt its wonderful power by immediately acting upon the

### LIVER, STOMACH, HEAD, AND KIDNEYS,

*Freeing the Skin from all Humours, and purifying the Blood.*

Is the only PILL that does not weaken the system, therefore, especially suitable for the Australian Colonies. It necessitates no change of diet or abstinence from the bath, and the most delicate constitution can take them.

**CAUTION.**—Owing to the immense sale that my PILLS have commanded, it has induced dishonest and dangerous imitations. ASK FOR ABRAHAM'S PILLS, and see that each box, by whomsoever sold, bears the Inventor's name and Trade Mark.

# The "Sydney Mail,"

AND NEW SOUTH WALES ADVERTISER:

THE LARGEST AND MOST POPULAR ILLUSTRATED WEEKLY PAPER

PUBLISHED IN AUSTRALASIA.

A BUDGET OF LITERATURE, AGRICULTURE, SCIENCE, MINING,  
SPORTING NEWS AND GENERAL INFORMATION.

THE ILLUSTRATIONS usually cover FIVE or SIX pages. The Artists' and Engravers' work is not excelled by that of any publication in the Australasian Colonies. Works by some of the best Artists and Engravers of England and the Continent are also obtained by every mail to enhance the pictorial department of this increasingly popular Journal. All current events capable of pictorial treatment are given.

LITERARY MATTERS are especially attended to in the *Sydney Mail*. Original contributions by the best Australian writers are constantly appearing in its columns, and from all sources a plentiful selection of the most curious and interesting extracts is chosen and published in each week's issue.

PASTORAL AND AGRICULTURAL.—These departments being connected with the staple industries of Australia, are regarded as special features of the *Mail*. Current legislation is carefully considered, so that the interest of Graziers and Farmers may be properly conserved; and new inventions calculated to be useful on Farm or Station receive prompt attention. Novel as well as familiar crops form subjects for comment; and with a view of helping Australia, the progress of other countries is not overlooked.

MINING.—The importance of reliable information from mining districts is fully realised by the proprietors of the *Mail*; and to overcome the effects of sensational rumours, special reports, by competent writers, of new fields are promptly obtained.

In regard to SPORTING, that well-known journal *Bell's Life in Australia* is incorporated with the *Mail*. The services of "Nemo," admittedly the most competent writer on Turf matters in the colonies, are permanently retained. Aquatics, which find so natural a home on the splendid waters of Port Jackson, are carefully chronicled by experts; and Cricket, Football, and the minor sports are copiously reported and impartially commented upon.

A LEADING HORTICULTURIST each week provides Garden Directions, which are eminently practical. The usefulness of the Horticultural Department is acknowledged by thousands of amateur and professional gardeners.

AMPLE PROVISION IS MADE FOR THE FAMILY. There is the LADIES' PAGE, comprising brightly-written comment on subjects of interest to the sex; the latest Fashion Gossip; short and racy essays on social questions; and varied and valuable Household Hints and Information. In the YOUNG FOLKS' PAGE, there is always a genial story, as well as a column of carefully selected Wit and Humour. STORIES have a prominent place in the *Mail*, the best English and Australian authors being laid under contribution.

THE LATEST EUROPEAN AND INTERCOLONIAL TELEGRAMS are published each week.

THE NEWS OF THE WORLD is especially and exhaustively collated for publication in the *Sydney Mail*, which enjoys the advantage of the news-collecting agencies of the most prosperous of colonial newspaper establishments.

GARDEN, ORCHARD, AND FARM CALENDAR, AND DIARY.

The Blank Half of this page is intended for Notes, such as the sowing of seeds, the blooming of plants, planting and other garden operations.

As this calendar is written for the Colony generally, it will be necessary to remember, that instructions cannot possibly be written that are adapted to all latitudes, and for variations in the usual weather; common sense and judgment must be brought to bear upon the directions given in order that successful results may follow.

**GARDEN—VEGETABLES.**—Always keep unoccupied land well broken up, and allow no weedy growths to harbour insect pests, and impoverish the soil. Summer vegetables—such as some varieties of beans, Chinese long and Fiji runners, also Chinese spinach, sweet corn, cucumber, vegetable marrow, melon and pumpkin—are in season. Only on the Downs, or in cold districts, can other vegetables be grown at this hot season, for during the hot weather it is waste of labour, time, and money to attempt to grow them. Plant sweet potatoes, and get land in readiness for cabbage and cauliflower seeds to be sown in a month or six weeks' time, or sooner in colder districts.

**FLOWERS.**—The same care and culture generally as for vegetables, and general attention to cleanliness and appearance is the most to be done. Roses and ornamental shrubs may be layered, and roses budded. Seeds of zinnias, balsam, coleus, amaranthus, and coxcomb may be sown. Plants, such as dahlias and chrysanthemums of weakly and straggling growth, need keeping in trim with the knife, and securing with stakes. The dead or decayed leaves should be cut off. Preparations should be made for the Autumn sowing of annuals. Among other plants and shrubs flowering this month are allamanda, dahlia, Indian hawthorn, honeysuckle, and canna (Indian shot).

**FRUIT.**—Little can be done now, but matters of ordinary cultivation. Pine apples and bananas may be planted; fruit trees of all kinds prevented from wasting their energies in the production of useless wood, by pinching out all the young shoots; tropical fruits grown in pots may be planted out; and where mulch is available, it is of great advantage to cover the soil with a *thin coat*, as it prevents excessive evaporation and too great absorption of heat into the soil; and, if not too freely used, is promotive of health, vigour, and productiveness generally to the trees and crop. Straw, grass (free from seed), leaves of all kinds, and straw manure form effective materials for mulching.

**FIELD.**—Destroy weeds before they seed; break up land in preparation for future crops; sow small quantities of Cape barley, rye, and oats, for green fodder in the colder districts; and maize for a late crop in the Central districts; but in the North, sow *setaria germanica*, teosinte, and any of the tropical millets. Keep growing crops clean, but do not disturb the ground too deeply during the heat of summer.

**PLANTATION.**—Among the sugar, cleansing and planting operations will still need careful and constant looking after, and may be attended to in the North from time to time as weather and circumstances permit or render necessary. Arrowroot will now simply need ordinary cultivation, for promoting free growth and keeping down weeds. Coffee will now be setting its berry, and if any means of applying liquid manure are available, it could not be done at a better time. As a matter of course, the plantation of such should be kept always scrupulously clean, and either a broken surface kept to the soil for the purpose of a mulch, or a light mulch (or covering) of some other material be provided.

**BUSH-HOUSE.**—This should now be gay with coleus, caladiums, begonias, gloxinias, achimenes, and tydeas; and seeds of primula, cineraria, calceolaria, and pansies, and other choice florist's flowers may now be sown in boxes or seed pans, but should be protected by glass or calico in the event of heavy rain. Ferns may be planted and orchids fixed, provided weather be showery or water available. To grow ferns successfully the following conditions are requisite:—Plenty of moisture during the growing season; perfect drainage; shade not too dense—excluding direct sunshine but freely admitting light—and suitable soil. The best soil is to be found in the bush under trees, or in or around old trees that have been partially destroyed by fire; the leaf mould, decayed vegetable matter and the burnt wood or charcoal being admirably adapted for fern culture and growth.

**FEBRUARY**

GARDEN, ORCHARD, AND FARM CALENDAR, AND DIARY.

The Blank Half of this page is intended for Notes, such as the sowing of seeds, the blooming of plants, planting and other garden operations.

**GARDEN—VEGETABLES.**—This should be an active month. Dig roughly all unoccupied beds which have been previously trenched, adding well decomposed manure, or fine bone dust, if other manure not available. Transplant cabbages, Brussels sprouts, cauliflower, celery, &c. Sow French beans, Brussels sprouts, carrot, cauliflower, celery, mustard and cress, lettuce, radish, prickly spinach, endive, onion, peas, parsnip, and turnip. Plant out strawberries in ground previously prepared by being trenched and thoroughly manured, treading the surface very firmly before planting. Mulch the melon and cucumber holes with a dressing of long stable manure; form the surface between the holes so as to catch water during thunder showers. In very dry weather, when the cucumber plants appear to suffer, give ten to twenty gallons of water in the evening to each hole, so that they may be thoroughly soaked, applying the water so that it may get into the soil where the roots are. Gather seeds as they ripen. French beans, &c., should be gone over daily, and gathered as soon as they are ready. In the North, now is the best time in the year for sowing sweet corn, but it is yet early for the bulk of the vegetables mentioned above.

**FLOWERS.**—Great activity must prevail now to catch the season for a good floral display with such plants as will not stand the heat. Most English annuals can be grown now and later on, that will not even germinate during the heat of summer. No matter how excellent the seeds of mignonette, sweet pea, larkspur, and many other annuals indigenous to cool climate may be, they positively refuse to germinate while the soil heat is high, and many people waste time, patience, and means trying to effect the impossible, and blame the seedsman for their own mistake. Rich soil and a well prepared friable seed-bed, and if artificially shaded from sun and heat, so much the better; and then seeds of phlox, pansies, coreopsis, asters, cinerarias, daisies, and many other floral gems and favourites, can be grown successfully, on the Downs especially, in South Queensland fairly, but in North Queensland only partially and then by starting later on. Continue to bud and layer roses, and layer also any choice shrub desirable to propagate. Keep all clean and neat. Abutilon, clerodendron, cobaea scandens, tocoma jasminoides, and other plants should now be in full bloom.

**FRUIT.**—Continue planting tropical trees from pots, and in the North also forming plantations of pines and bananas. Bud all stone fruit. Thin fruit on trees too heavily laden, and prop and secure all branches which are carrying a great weight of fruit. Oranges bearing heavily would be benefited by a top-dressing of some good special manure, or by liquid manure from cowsheds and urinals, or hen manure previously mixed or dissolved in water, diluted to a weak state and applied freely, or during a heavy fall of rain. Superphosphate of lime freely mixed with wood ashes and lime is an excellent dressing to apply to an orangery in wet weather, when the trees are bearing heavily. Collect leaf mould, or waste vegetable matter, for use when planting fruit trees during the approaching winter.

**FIELD.**—Continue to prepare land, ploughing it deeply. Lucerne may be sown in clean, well-ploughed deep soil. Drilling is recommended in place of sowing broadcast. Vetches or tares, Cape barley, and sorghum should be sown for green food for stock. If sheltered, and in a warm position, 90 day maize may be sown. Early potatoes may be planted whole. Sulphate of lime or "superphosphate" applied to the soil greatly increases the health and productiveness of potatoes. Keep the land clean, and hill up maize.

**PLANTATION.**—Most of the instructions for last month still hold good, except that planting cane in the South is now risky.

**BUSH-HOUSE.**—In the event of the weather being seasonable, that is frequent showers and sunshine, all plants will be making luxurious growth. Care should be taken to prevent the droppings from the roof battens, doing injury to tender ferns and plants. Attention should also be given to the drainage for though the fern tribe need abundant water it must not be stagnant.

**MARCH**

The Blank Half of this page is intended for Notes, such as the sowing of seeds, the blooming of plants, planting and other garden operations.

**GARDEN—VEGETABLES.**—If previous instructions have been followed, the seed beds will be full of young plants, and there will be sufficient land well dug and manured ready to receive them. Plant out cabbages, cauliflowers, Brussels sprouts, celery, &c., in favourable weather, that is, just before rain, choosing the largest and finest plants. Keep the beds free from weeds by frequent and deep hoeing. Give asparagus beds a slight dressing of salt, and fork in plenty of well decomposed manure. Transplant eschalots. Sow English beans, French beans, beet, carrot, mustard and cress, celery, lettuce, endive, leek, onion, peas, parsnip, parsley, radish, prickly spinach, turnip, couve tronchuda, savoys, and so forth. Divide herbs. Beds deeply trenched and well enriched with manure, should now be made for asparagus or rhubarb, either of which will thrive better, and be more readily and thoroughly prolific if never transplanted.

**FLOWERS.**—Still follow up the plan of utilising the borders during winter and spring with favourite annuals, by enriching the soil with decomposed manure or bone dust, and sowing the seeds or transplanting the young plants in suitable weather. Those who wish to have a good display of pansies, asters, and mimulas, should not leave the sowing later than this month. The farther North one goes, the more does this apply. Preparations should now be made also for a good bed of cuttings, by providing a patch of friable soil, and some artificial shade for it, and through the winter it would render much service for striking cuttings of all choice plants, roses, shrubs, etc. This bed must not be in the vicinity or shade of large trees. *Dombeya masterii*, honeysuckle, many of the rose family, feather palm (*cocos plumosa*), antigonon, Japan lily, and the yucca (Adam's needle) flower during this month.

**FRUIT.**—Fruit trees or vines that have been sickly or unproductive during the season, should now be seen to, so that they may be manured, syringed, scrubbed, pruned, or grubbed out, as the case may demand. Plant out strawberries; it is advisable to use new ground as a strawberry bed. A spade should never be used in an orchard or orangery, being frequently very destructive to the roots of fruit trees. A fork is the proper implement. All land intended to be planted with fruit trees during the approaching season should be trenched and manured this month if not already done. All stiff and retentive soils should be carefully drained at least six inches deeper than they are trenched, regardless of the inclination of the surface. It should be remembered that the roots of the trees will be under the surface where the water will be retained, unless drainage be provided.

**FIELD.**—Sow lucerne, clover, rye grass, prairie grass, oats, barley, wheat, vetches or tares, and sorghum. Sow main crops of potatoes in all the warmer districts of the Colony. Hoe early potatoes; gather maize as it ripens; cut tobacco leaves as they arrive at maturity. Sow mangolds, Swede turnips, and kohl rabi for winter food. In the North, maize, tobacco, *setaria germanica*, and teosinte may still be sown.

**PLANTATION.**—In the North great activity in planting will still continue, both with sugar cane and tobacco fields, and where reha cultivation is thought of, the time for breaking up and preparing land for the cuttings is now at hand.

**BUSH-HOUSE.**—Now is a good time for forming one. Taste, ingenuity and skill are great adjuncts to success with these artificial aids to comfort and luxury. More individuality and less imitation brought to bear on these structures would probably bring to light some new and valuable ideas. The real value of these structures is hardly realised yet, so an effort to make them of some more durable and permanent material would be a step in the right direction. They should never have any living shade about them, nor yet anything growing near them like passion vines or greedy feeding shrubs or trees, or the soil within will be impoverished.

**APRIL**

GARDEN, ORCHARD, AND FARM CALENDAR, AND DIARY.

The Blank Half of this page is intended for Notes, such as the sowing of seeds, the blooming of plants, planting and other garden operations.

**GARDEN—VEGETABLES.**—Advice for last month still holds good, and in the far North no season like the present can be availed of for planting potatoes, and growing some of the leading winter vegetables, such as cabbage, lettuce, carrots, radishes, peas, and kidney beans. In cooler districts keep down weeds by continual hoeing. Divide and plant out pot herbs, giving water if requisite, until they are established. Plant out cabbages, cauliflowers, &c., in favourable showery weather. Sow English beans, mustard and cress, lettuce, endive, leek, onions, peas, radish, &c., for succession.

**FLOWERS.**—Many annuals should now be upstrong enough to handle, and judicious thinning is very important. One or two plants in each place is ample, for they will make as large and as floriferous a display as fifty. Plants not wanted in any patch may be transplanted. Many hardy flowering plants such as petunias and geraniums, and other soft wooded things, may be struck freely now by putting cuttings in where they are to remain. The petunia strikes freely enough thus, but sometimes does not transplant well, so those who take this hint will find it helpful. To rose cuttings the same remarks apply. Some varieties—such as Marechal Neil—strike freely, but succumb on being disturbed; the safe way of dealing with them therefore, is to put the cuttings where they are to remain, of course, into some soil adapted for encouraging root growth. Those wishing to grow good asters or pansies will find a shady border under a fence, and additional shading with boughs or calico of very great service. Violets also want all the cold they can get in Queensland to flower freely. The transplanting of flowering shrubs and roses, may now be attended to. Chrysanthemums should now be flowering freely, and may be greatly helped by the application of weak liquid manure. The climber or creeper known as quisqualis or ragoon creeper should now be in full bloom and forming a most effective arbour decoration.

**FRUIT.**—Where practicable, the transplanting of fruit trees can now be undertaken; and, if done with care, with as much earth as possible round the roots, they will soon emit new roots, and be established in their positions before the final fall of the leaf. This applies especially to evergreen fruit trees, such as lemons, oranges, mangoes, loquats, olives, tamarinds, &c. In transplanting, take care that a sufficiently large hole is dug to allow of the roots having ample room; if any of the roots have been bruised or broken in the moving, let the damaged portions be cleanly cut off with a sharp knife; do not set the transplanted shrub or tree any lower in the new ground than in its original place. For some days it is well to shade it, either by matting on sticks or any other contrivance that may answer the desired purpose. Water should also be freely applied when the tree is planted to settle it in its new position, and only at occasional intervals afterwards, when dry weather prevails. Prop up bananas which have heavy bunches of fruit.

**FIELD.**—Sew vetches, lucerne, wheat, barley, oats, mangold and Swede turnips. Gather sorghum and imphoe as they ripen, or the birds will either consume or scatter it. Plough land for future crops. Cut and house tobacco as soon as it arrives at maturity.

**PLANTATION.**—In the South this consists in getting ready for garnering and manufacturing arrowroot or sugar; in the North, cane planting or setting out tobacco may still proceed if showery weather permits. Coffee planting may be attended to in the North, also at any time that soil moisture shows it to be advisable.

**BUSH-HOUSE.**—The shading must not be too dense now, or it will be destructive or weakening to plant life and especially to floriferousness. Vacancies may at any time be filled, and taste and attractiveness displayed in furnishing suitable variety of flowers in season. Much needed propagation should now be attended to. For both ferns and orchids a few clumps of peat will be found invaluable as a basis.

**MAY**

{ The Blank Half of this page is intended for Notes, such as the sowing of seeds, the blooming of plants, planting and other garden operations.

**GARDEN—VEGETABLES.**—Transplant onions, garlic, eschalots, rhubarb, &c. Sew lettuce, endive, leek, onion, peas, radish, mustard and cress, cabbage, turnip, carrot, parsley, and pot herbs. Prepare beds intended for asparagus. In doing so, choose the best soil the garden affords, and the ground must be dug deep and most plentifully manured. Rhubarb may be planted also, in deep-dug, well-manured beds. The onion crop sometimes suffers severely from the ravages of a green grub, which is in some soils in large numbers. Land intended for this crop, should be previously examined for these pests, and if possible receive a dressing of soot, which would be a valuable manure for the onions. In the tropical North, only a few things, which mature rapidly—say in a few weeks, or at most two or three months—are worth trying. Eschalots, lettuce, radishes, cabbage, turnips, and carrots, of these above mentioned, and sweet corn, kidney beans, and English or sweet potatoes, being also serviceable.

**FLOWERS.**—Hardy English annuals may still be sown, but the results from those put in now, will not be equal to others sown months earlier. Continue planting roses and flowering shrubs, and attend to all needful pruning, putting in the cuttings in the cutting beds before mentioned, prepared for propagating purposes. Plant all spring flowering bulbs and tubers, dahlias included, and mark the place sufficiently, if in the case of gladioli or dahlias, with a stake suitable for the plants to be tied up to. (In the Southern parts of Queensland dahlia planting had better be left till September). Plant hedges of Duranta or the African box thorn; the former will do in cuttings and should be planted thickly, the latter in seed. The poinsettia pulcherrima should now be showing its brilliant bracts; also the hibiscus. Camellias are now in full bud or bursting into bloom.

**FRUIT.**—Transplant fruit trees and evergreen shrubs, do not plant too deep; put fine mould among the roots, making it firm with the foot, and using water copiously afterwards to settle the soil among the roots, unless the soil is wet. Transplant strawberries into leaf mould or well decayed cow dung, giving them abundance of water during their fruiting season. In cold situations, protect tropical fruit trees, and throw a little hay over the pineapple plants, with the same object.

**FIELD.**—Sow vetches, barley, oats, rye, wheat, also lucerne and other grasses. Cut tobacco, and continue planting it out in the North. Earth up potatoes. Rye as green fodder, is much relished by cattle and horses, and if not allowed to go to seed, will make a good sward for grazing over, being green and succulent during winter and early spring.

**PLANTATION.**—During this month, in the South, cane crushing and arrowroot manufacture will require best attention, and the cane will also come in for its manipulation soon in the North. Coffee will now be ripening and will require to be gathered and treated without delay. Where fresh plantations are demanded, good seed beds should now be made under a dead shade, and the seed sown in nursery beds for transplanting during the moist weather of summer. Plantations of rhea may still be made from cuttings, if the soil moisture is sufficient to warrant it. Cane planting may still be done in the North, also tobacco and maize may still be sown. All new work in clearing and breaking up fresh land should be pushed forward vigorously while the winter lasts.

**BUCK-HOUSE.**—If this retreat has been seasonably attended to, it will now be gay with such flowering plants as fuchsias, begonias, pansies, and other favorites, and cinerarias and primulas will be ready to do their best presently. All flowering plants are the better for an occasional watering with liquid manure, not at all strong—weak but often is the rule; much harm is frequently done by using the liquid too strong.

**JUNE**

GARDEN, ORCHARD, AND FARM CALENDAR, AND DIARY.

The Blank Half of this page is intended for Notes, such as the sowing of seeds, the blooming of plants, planting and other garden operations.

**GARDEN—VEGETABLES.**—No colonial grown cabbage seed should be sown until the latest sowing takes place, as it runs to seed when the plants are ready to heart. The English seed does not run until the second season, and will, therefore heart perfectly. Transplant horse-radish, eschalots, rhubarb, strawberries, seakale, &c. Sow brocoli, Brussels sprouts, cabbage, red cabbage, cauliflower, lettuce, endive, peas, English beans, radish, &c. To grow watercresses, dig a trench as if for celery; turn in abundance of well-decayed manure, at the bottom, sifting some fine soil over it, and dibble the cuttings in at a foot apart, giving the whole a good watering. They must be well watered afterwards about twice a week; and if a leaning shade be erected over them on the sunny side it will be of service. Cabbage, carrots, lettuce, radishes, turnips, sweet corn, and sweet potatoes, are still serviceable for the North.

**FLOWERS.**—The sowing of annuals becomes risky and doubtful now, except a few which are proving very hardy in Queensland. If moisture be plentiful in the soil, however, and the land well enriched to cause a rapid development, that will materially alter the case. As a rule, however, annuals sown now, unless tender ones adapted to the summer growth, are not likely to give satisfaction. Beds and borders should be dug over. Finish the pruning and transplanting of roses and flowering shrubs, and water all newly planted shrubs or trees sufficiently to keep the soil moist, but not more. Too frequent application of water to plants not freely growing, is often death rather than life to the roots.

Fill up the cutting bed now with choice cuttings, and water them sufficiently at first to keep the soil moist about them, but not more. Violets should now be at their best; and in cool situations, the English primrose may be got to flower even in the neighbourhood of Brisbane. Dwarf nasturtiums should be flowering freely during this and the two following months.

**FRUIT.**—Orange trees which are not in good health should have their trunks and large branches scrubbed with a scrubbing brush, and washed clean before the spring growth commences. The surface soil to the full circuit of the foliage of the tree should have a dressing of stable manure. Apple trees affected with American blight should have the earth removed from the roots near the surface, and they should be painted with castor oil, or strong Gishurst Compound. Some sorts of apple are "blight proof," and these should have the preference when planting, as far as practicable; and the others should be worked upon stocks which are blight proof. Transplanting fruit trees and vines should be proceeded with vigorously. Prune fruit trees and vines, and protect bunches of bananas in cold situations, by covering each with a light bag open at the bottom.

**FIELD.**—The arrowroot will fill out rapidly as the cold checks the growth at the top. Sow oats, lucerne, rye, grass, vetches, prairie grass, &c. Prepare land in warm situations for sowing with maize, and planting with potatoes next month. Early sown wheat often escapes rust and other ills which affect later crops. It is late for maize and potatoes in the far North, unless done at once.

**PLANTATION.**—The advice given last month is of equal value for this, everywhere in the South, for the weather will still be too cold to allow of planting fresh breadths, and only gathering crops or breaking up new land can yet be done profitably. In the North, the weather is likely to be too dry in most places for successful planting, and as the busy time for cane crushing is commencing, planting may stand over in most cases.

**BUSH-HOUSE.**—Finish making alterations and additions as soon as possible now, and attend to the directions given for the last two months. Fill up vacancies with ferns, lycopods, and orchids; and remove everything unsightly, or the effect is easily destroyed by a little negligence and slovenliness. Repot ferns. As the weather, particularly at night time, is now getting cold, the westerly side of the house should be well protected by matting, and all watering done in the middle of the day.

## JULY

The Blank Half of this page is intended for Notes, such as the sowing of seeds, the blooming of plants, planting and other garden operations.

**GARDEN—VEGETABLES.**—The seeds for sowing this month are limited to those which either mature quickly or endure heat well. Except on the Downs, cauliflowers should not be sown; cabbages, carrots, parsnips, beet, peas, lettuce, radishes, mustard and cress, turnips, onions, leeks, and herbs may still be sown. In well prepared ground, asparagus and rhubarb seed may be sown, the plants from seed, in either case, being much more vigorous and prompt in maturing if not transplanted. In the North, a final sowing of sweet corn should be made this month, and also the last sowing of cabbage, lettuce, radishes, turnips, and kidney beans. When sowing seeds after rain, see that the land is in a friable condition; if too wet, it will clog and bind together. The soil should never be walked over or disturbed, by sowing or digging the crops, until it is sufficiently dry to be friable. Plant out onions and eschallots. Three or four days after planting, rake the soil between the rows in dry weather, it will kill thousands of weeds.

**FLOWERS.**—The sowing of English annuals should now be over, the varieties seasonable being such as portulacca, balsams, cockscombs, amaranthus, a few annual phloxes and may be also Indian pinks. Early sown annuals will now be in bloom, and those wishing to save good seed should ruthlessly uproot every indifferent flower, or the strain of seed must degenerate; by acting strictly thus, everyone can greatly improve upon his present strain of bloom. Finish the planting, pruning, and propagating of roses and shrubs, and finish hedge planting. The wigandia is now in flower and many roses should be blooming freely.

**FRUIT.**—Finish pruning fruit trees and vines. Plant out fruit trees and vines, and cuttings of grape vines, and such trees as are propagated in that manner. Graft young orange trees. The Seville orange forms the best stock upon which to graft approved sorts. Prepare land hitherto neglected, that all planting may be finished by the end of next month if possible. Eradicate docks, and give a dressing of salt to the vines and fruit trees, lightly forking in well-decayed manure where necessary.

**FIELD.**—Finish planting lucerne as early as possible. Sow oats, vetches, &c. Prepare land for potatoes, maize, tobacco, sugar-cane, carrots, mangold wurzell, chicory, etc. Plant potatoes and maize. Take up and prepare arrowroot as the crop matures, and as soon as convenient get in the seed for next season's crop. Plant cuttings of *Jatropha manihot* for tapioca. In the North, plant sweet potatoes, and if moist enough, sow rice, millet, and teosinte.

**PLANTATION.**—As sugar manufacture is now in full swing, soil preparation and planting will be as much as possible deferred; still, where it is at all possible to get out-door work in the soil done, determined effort should be made in such cases to compass it. Timely work is everything in profitable cultivation. Cane planting may be deferred a month or two, yet the plant would mature earlier, and the juice acquire a better density if early planting were done. Tobacco planting in the North should be advanced almost to first crop now, and watchfulness therefore be called for to secure quality, the only way to realize profit thereby. Cleanly and thorough cultivation yields good returns always in plantation, garden or field.

**BUSH-HOUSE.**—There should be plenty of bloom in a well-tended bush-house now, as begonias, cinerarias, primulas, pansies, fuchsias, violets, and mimulus are in season, and should have frequent waterings with weak liquid manure. Never neglect an opportunity of adding to the fernery, it may be by weeding out something inferior to substitute a better therefor. A well-ordered fernery is a greenery everywhere the eye may chance to alight. This is usually one of the most trying months of the whole year for bush-house plants. The cold westerly winds that commonly prevail now penetrate into every corner and the more tender vegetation suffers seriously and often succumbs altogether.

**AUGUST**

{ The Blank Half of this page is intended for Notes, such as the sowing of seeds, the blooming of plants, planting and other garden operations.

**GARDEN—VEGETABLES.**—Peas sown this month should have a cool aspect. A dressing of salt at this season, at the rate of 7 or 8lbs to the perch, would be of great advantage to most soils, tending to sweeten the land, retain moisture, destroy insects, and discourage weeds, fungus, and mildew. Sow beet, melons, cucumber, lettuce, okra, parsley, pumpkins, vegetable marrow, radish, rhubarb, round spinach, tomato, tobacco, carrot (large sowing), leek, cabbage, kidney beans, turnip, parsnip, etc. Plant out horseradish, rhubarb roots, herbs, sea-kale, asparagus, Jerusalem artichokes, ginger, etc. Destroy weeds while young; syringe with Gishurst Compound, or with strong soap suds in which a little kerosene has been well mixed, plants which are attacked with aphids. In warm localities South, sow sweet corn, and rosellas, the latter in a bed for transplanting.

**FLOWERS.**—Watering in dry weather is now very advantageous, taking care that the water be got to the roots. If no other plan can be devised, a piece of an old broom handle pointed and used to make a funnel to open the soil, will render efficient service, the hole at the top being covered with a stone or something to hide it and to be used again. All transplanting will need to be done with greater care now, as the heat increases, or the tender plants will succumb. See that recently planted roses and shrubs are moist at the roots. Never apply liquid manure to the roots of a plant not healthy or in vigorous growth. Precautions should be taken to protect plants and shrubs in the event of the weather being severe. The *Bignonia venusta* with its orange racemes should now be an attractive object, and were it not so common would be more highly thought of. Several of the *dendrobiums* (orchids) ought now to be showing flower.

**FRUIT.**—Endeavour to finish planting fruit trees, vines, and other plants, as the sun will be gaining power, which will increase the labour and risk. Young orange trees which show too much bloom should have it removed, and receive a little liquid manure to produce foliage. If any of the orange trees are affected with the aphids, they should be well syringed with a solution of Gishurst Compound, or of water, in which a small quantity of soft soap and sulphur have been dissolved. A small quantity of kerosene in a bucket of warm water has been found very effectual against scale, blight, etc. It should be well mixed, syringed on the trees but kept from the roots. This syringing should be done either before blossoming or after the fruit has set. Slacked lime dusted on the trees is sometimes found very useful. Graft china pears as they break very early. Keep the land clean and the surface open.

**FIELD.**—Keep the crops clean. Plant potatoes, maize, rice, yams, arrowroot, etc. Hoe up potatoes. Sow sorghum, imphee, teosinte, and tobacco. Silkworms will now require constant attention, feeding them frequently with young tender leaves. Earth nuts are a profitable crop in a light friable soil, especially near the sea shore, and in soil having lime in it.

**PLANTATION.**—In the South, planting, except in the case of arrowroot, may be profitably deferred. All land intended for planting should now, however, be in readiness or nearly so. In the North, sugarcane planting should not longer be deferred, nor should rhea planting be left any later, neither tobacco.

**BUSH-HOUSE.**—In warm and sheltered localities specialties in coleus, caladiums, and crotons, should now be in place for the season, and gloxinias, achimenes, and tydeas be planted. Fine bone-dust is an excellent invigorator of fern borders, and if mixed with peat, wonderfully assists the finer sorts. Bone-dust and powdered charcoal with a peat base, is excellent for all ferns and orchids requiring rooting material. Ferns may be raised by sowing the seed (spores) on the surface of fine soil in a flower pot or seed pan, which should be kept moist by being occasionally placed in water, this being far preferable to watering on the surface; or better still by sowing the spores on peaty clumps of dead stag—or elkhorn ferns.

**SEPTEMBER**

GARDEN, ORCHARD, AND FARM CALENDAR, AND DIARY.

The Blank Half of this page is intended for Notes, such as the sowing of seeds, the blooming of plants, planting and other garden operations.

**GARDEN—VEGETABLES.**—Destroy all summer weeds as they make their appearance, and so keep the land thoroughly clean. Take every opportunity to collect manure of all kinds, to be thrown into well puddled tanks, to rot down for use in autumn and winter. During the summer months in this colony, manure should generally be applied in the liquid form. A cask sunk in the ground, with hen manure or cow dung thrown into it, and water or the house slops added, and occasionally stirred, will afford a ready supply. See that crops are not planted too closely to be crowded. Trench vacant land in preparation for future crops, leaving the surface rough, to mellow by exposure. Sow French beans, parsley, beet, capsicum, chilli, cardoons, lettuce, eggplant, okra, sweet corn, Cape gooseberry, radish, round spinach, tomato, tobacco, cucumber, melons, pumpkins, vegetable marrow, carrots, parsnips, etc. Transplant cabbage, eschallots, etc. Plant Jerusalem artichokes, rhubarb roots, sea-kale, asparagus, ginger, earth nuts, etc. Sow rosella. Plant sweet potatoes. On the Downs, plant English potatoes.

**FLOWERS.**—Make edgings of alternanthera as the weather gets warmer and moist, and plant out ribbon and carpet designs in flower borders, with coleus and other suitable foliage, and flowering plants. Watch for green fly on rose bushes and elsewhere, and apply Gishurst Compound, or soft soap and water with a syringe to destroy them; be careful that the mixture is not too strong. Fill up borders with tender plants for summer ornamentation and display. Attend to cleanliness and neatness everywhere. Dahlia bulbs may now be planted, taking care that the colours are properly grouped for effective display. Sticks for their support should be put in at the time of planting. Azaleas should now be doing their best, also pansies towards the end of the month. Magnolia fuscata (known as the port wine plant) is in bloom; and among climbers the wistaria is very noticeable. The double-coloured scrophulariacae should be a surface of bloom.

**FRUIT.**—In dry weather give recently planted fruit trees sufficient water at the roots at intervals, leaving the surface to be kept damp by a mulching of stable litter. Destroy all caterpillars that infest the vines about this time. Attend promptly to the disbudding of grape vines; removing all suckers and superfluous shoots as soon as they appear. Tie up fruiting shoots to the trellises as they advance in growth. Graft apples and pears. The strawberry plants will need attention in the way of weeding and watering.

**FILL.**—Keep the land clean and loose among growing crops. Plant arrowroot, yams, sweet potatoes, tobacco, etc. Sow imphee, sorghum and maize for green fodder. The sunflower may now be sown. Continue planting and hill potatoes, especially in the cooler districts. Finish cotton pruning.

**PLANTATION.**—As the warm weather advances, the planting of tea, coffee, allspice, cinnamon, cocoa, as well as all tropical fruits and shrubs should be attended to, in tropical or sufficiently warm localities. When newly planted and firmed with the foot afterwards, saturate the soil with water, and then apply a coating of mulch to prevent the surface from caking, and the moisture from evaporating. Some light shade to the foliage until the plants take hold of the soil is also necessary to give the nursed and tender plants a chance. In the South, plant tobacco and sugar cane; in the North, sugar cane, and keep the soil everywhere in as good a state of tilth and openness as possible, to catch all the moisture available in dews or showers.

**BRUSH-HOUSE.**—Remove as far as possible all dead and decaying stems and fronds of ferns, as they furnish a lurking place for mealy bugs, thrip, and scale which are a scourge of many of the fern family. A sponge moist with a solution of Gishurst Compound applied to fronds thus affected, is at times needful. As the heat increases take care that the roof shading is sufficient. Re-pot large ferns and where necessary replenish the soil with new soil composed of leaf mould, scrub soil with a large proportion of sand.

## GARDEN, ORCHARD, AND FARM CALENDAR, AND DIARY.

The Blank Half of this page is intended for Notes, such as the sowing of seeds, the blooming of plants, planting and other garden operations.

**GARDEN—VEGETABLES.**—Keep crops clean, mulch them and give water where necessary, and if watering be attempted, it must be more than a mere sprinkling of the surface, for that does more harm than good. Sow parsley, French beans, lettuce, okra, radish, round spinach, beet, vegetable marrow, melon, carrot, cucumber, tomato, rosella, etc. Sow St. John's Day cabbage, which is the best for summer culture, being early, hardy, of fair quality and withstanding heat, dry weather and aphid better than any other. Convert all waste vegetables into manure in some form; either to feed pigs, or throw them into the manure tank or cask to rot. In the warmer districts of the colony, only the Chinese spinach, Chinese long or Fiji beans, or Madagascar beans are worth cultivating, now that heat is in the ascendancy. Sweet potatoes may be planted everywhere now with confidence.

**FLOWERS.**—The main work in the borders now is watchfulness for weeds and seeds of annuals, and keeping things generally snug and trim. Only such planting as is seasonable, which consists in transplanting tropical annuals, and biennials, or in propagating the same from cuttings should be attempted. Trim *duranta* hedges, and plant edgings of *alternanthera* when moisture permits. Always keep a supply of good compost ready to put about the roots of choice plants when putting them out into the borders, or for sowing choice seeds in. English annuals of all kinds should now be making the garden gay. Phlox, pansies, verbena, stocks, sweet william, carnation, candy tuft, mignonette, poppies, petunia, lobelia, and many others; also the flaming lily (*amaryllis*), other of the lily family, and fuschias. The jacaranda is now a blaze of ethereal beauty, and among climbing plants, the chinese jessamine (*rhynchospermum jasminoides*) is prominent both from its scent and appearance. Oleanders and pomegranate too are in flower.

**FRUIT.**—Thin out the fruit on China peaches of all kinds, and carefully eradicate the suckers which spring from the root. Attend to disbudding, that is, removing superfluous shoots from fruit trees of all descriptions, as it is of great relief to the tree in every way. Remove all the strong watery shoots (which fill up the inside of the tree), so as to admit sun and air, and leave the whole strength of the plant to mature the crop. Support the branches of the tree as the fruit swells. Examine the orange trees, and if either thrip, smut, coccus, or fungus, appear on the stems, scrub them as recommended in June. Tie up the vines as they grow, being careful not to injure the foliage (which performs the functions of both lungs and stomach for the plant), and see that the fruit is sufficiently protected from the direct rays of the sun. It is a good plan in order to secure fine fruit, to thin out with a pair of sharp pointed scissors some of the grapes in overcrowded bunches. Sulphur the vines on the first appearance of *Oidium*; do this in the early morning while the dew is on the vines. Plant bananas and pine apples. Trench and drain the land intended for planting fruit trees in the winter; and if well cultivated, one crop taken from it would improve its texture.

**FIELD.**—Clean and earth up growing crops. Plant yams, earth nuts, ginger, and sweet potatoes. Sow sorghum, imphree, maize, *setaria germanica*, and in warmer districts, teosinte.

**PLANTATION.**—As showery weather permits, attend to the planting of coffee, arrowroot, tapioca, sugar cane, and tobacco. Let the cultivation be liberal, if good returns are to be looked for; but for it to be truly liberal, it needs to be done intelligently as much as freely.

**BUSH-HORSE.**—These structures in the North could now be made serviceable for growing salads, French beans, and many choice vegetables as luxuries for the table. That will come to be one of their uses in tropical situations yet. Their use as a luxurious and ornamental retreat for producing many of the beauties of nature is already known and somewhat appreciated; but there is great scope remaining for the improving and inventive powers and taste of man to work, in greatly enriching them in every way, both as to their contents and designs.

**NOVEMBER**

GARDEN, ORCHARD, AND FARM CALENDAR, AND DIARY.

The Blank Half of this page is intended for Notes, such as the sowing of seeds, the blooming of plants, planting and other garden operations.

**GARDEN—VEGETABLES.**—Some of the most profitable vegetables to grow anywhere in Queensland during the summer months are the Chinese long runner beans, or the Fiji bean, and the Chinese spinach. The Madagascar bean grows well during the summer. At this season the beds should have the ridges laid across the hills in sloping ground, so as to catch the showers. Thin cucumber and melon beds where overcrowded, and loosen the soil if it is bound. Fasten down the shoots with wooden pegs so as to cover the ground evenly. Sow French beans, melon, cucumber, lettuce, okra, rosella, pumpkins, and sweet corn. Sweet potatoes may be grown anywhere this month.

**FLOWERS.**—Little can be done during the summer months among flowers, except the ordinary cleaning of the beds. Roses may be budded now or layered if increase is required. Angelonia, coleus, and summer growing herbaceous plants may be divided at the roots, or struck from cuttings, either in the open borders with occasional waterings, or in shady beds made for the purpose. Some of the summer growing annuals may be sown or transplanted, and double petunias, if particularly choice, may be layered now or during summer for transplanting in winter. Petunias do not bear removing kindly in this colony while hot weather prevails. Pansies or mimulus growing in shade, will flower for awhile yet, if freely watered. Among flower trees and shrubs now blooming are the magnolia, erythrina, vesper-tilio (cork tree), gardenia.

**FRUIT.**—Thin early peaches as soon as the fruit is fit for cooking. Mulch the trees a considerable distance around the stem. Plant all kinds of tropical fruit trees from pots, such as mangoes or jack-fruit. Clean out all superfluous shoots from fruit trees generally, in order to throw the whole strength of the plant into the crop; not injuring or removing any of the foliage unnecessarily. Remove suckers from grape vines, stop straggling branches, and rub off weak ill-placed shoots. If vigorous old Isabella vines have the ripest of the present season's rods pruned during this and next month, they will give a second crop of fruit. The cuttings also, if planted, will form strong roots before the planting season. Apricots and China peaches should be budded. Plant banana and pine apple suckers. Trench land intended for planting next season, to give it the sweetening influence of the summer's sun. Where pine apples are largely grown, it will pay to thin out the suckers early this month, as it not only causes the summer crop of fruit to be larger, but the young suckers which appeared on the pruned shoots will produce winter pine apples, which sell at a high price. The most convenient implement for thinning out, is the large strong-handled South Sea Island knife kept sharp at both sides of the point, and used with a downward thrust.

**FIELD.**—Keep the land clean with a horse hoe or scarifier. Stop tobacco plants as required, to direct the sap into the leaves intended for the crop, and remove caterpillars. In making oaten hay, cut the crop when well in ear, but before the seed is near mature; the whole plant is then in the best condition. In the North, millet and teosinte may be sown freely now for fodder purposes.

**PLANTATION.**—Much cane-planting is now generally done in the North, after the rush at the crushing is over. Early sown rice is now ready for harvesting, and will soon be growing strong for the second crop. Young coffee plants may still be planted out, if means for shading and careful watering be attended to. Two or three leafy boughs stuck around the young plants form the best shade for them.

**BUSH HOUSE.**—Ferns will now be making vigorous growth and will require frequent watering. If mildew makes its appearance sulphur should be dusted on the leaves. Attention should be given to the shading as the sun has great power this month. This, or rather the previous month, is the best time for starting a fernery or replenishing one already started.

## DECEMBER

GARDEN, ORCHARD, AND FARM CALENDAR, AND DIARY.

The Blank Half of this page is intended for Notes, such as the sowing of seeds, the blooming of plants, planting and other garden operations.

**GARDEN—VEGETABLES.**—Seeds sown during the summer months would do better if protected from the direct rays of the sun by some light cover a foot or two above the ground. Thin calico, or light open brushwood, not too dense would be suitable. If the seed beds were well watered, *so as to thoroughly soak the soil*, a few hours before sowing the seed, and the seed were covered by sifting over it some stable litter, there would not be so many failures even in summer. Sow French beans, lettuce, okra, radish, sweet corn, Chinese runner beans, and Chinese spinach.

**FLOWERS.**—Much of the advice given last month serves equally for this. Judicious watering is a very useful thing, but much of the watering done is more injurious than helpful, as it never by any chance penetrates the soil to the roots, and therefore does little good, indeed, in many cases it only cakes the surface soil. If people could only be educated to contrive in some way to get the water down to the roots instead of squandering it upon the surface better results would be seen. A flowerpot, a jam or other tin with a hole in it sunk in the soil up to the rim, with a layer of stones or sticks underneath to let the water run in quickly, would be a simple contrivance for effectual watering. The poinciana regia, bauhinia hookeri or native ebony, hydrangea, frangipanni are now in bloom.

**FRUIT.**—Thinning heavily laden trees and dis-budding or finger-and-thumb pruning is the principal work needed amongst fruit trees now. Straw under peach trees will protect the falling fruit from bruising. Straggling wood shoots should be stopped to keep the trees in form, and prevent the weaker branches being robbed of their share of nourishment. On the slightest appearance of Oidium among the vines or American blight among the apples, dress them as previously directed. Those who object to the use of sulphur and lime in their dry state, may boil one pound of sulphur and one pound of lime in a gallon of water for half-an-hour; one pint of this, when strained, may be mixed with ten gallons of water, and applied to the affected vines with a syringe.

**FIELD.**—Keep crops clean. Dig potatoes as soon as ripe, as they will not keep in the soil; and have them collected as they are dug, or the sun will cause them to rot. Harvest wheat, oats, and barley; if left too late the grain wastes in gathering. Finish haymaking, taking care that the hay is not over-dried, or its feeding properties are half destroyed. Sow maize, setaria germanica, millet, sorghum; in the North, teosinte and sweet potatoes may still be planted.

**PLANTATION.**—Cane planting may be attended to anywhere now. Coffee will need to be constantly watched, and falling plants replaced timely, to give the plot an equal start together. A hole a foot deep and the same in diameter on the uphill side of the plant, and filled with stones to the surface is an excellent device for watering either coffee plants on a plantation, or many things besides, and were it done, a little water would achieve wonders in a dry time.

**BUSH-HOUSE.**—Much of the attractiveness of a structure of this kind depends upon its tasteful ornamentation with rockeries, hanging baskets, and arrangement for all kinds of epiphytal growths. Gnarled or branched sticks are of great service in carrying stag-horn, elk's-horn, and bird's-nest ferns, also for many varieties of orchids. Stone work built up grotesquely to form shady nooks and corners would be likewise of great service for growing many things unfitted for more exposed positions. And, as said before, the bush-house in the North may be coaxed into useful service, after the manner of conservatories at home, only reversing the order by creating a lower temperature than prevails outside. As it is not an easy matter to thoroughly water hanging baskets, it is recommended that every bush house should be provided with a water trough or box in which the basket can be plunged in order to get a thorough soaking. A zinc-lined case, say about 2 feet long by 18 inches wide and deep, will be found to admirably answer the purpose.

## QUEENSLAND.

THE Colony of Queensland, formerly known as the Moreton Bay District—comprises the whole of the North-Eastern portion of the Continent of Australia; its boundaries being—on the North the Gulf of Carpentaria and Torres Strait; on the East the Pacific Ocean; on the West the Northern Territory of South Australia—the dividing line being the 141st meridian of longitude from the 29th to the 26th parallel, and thence the 138th meridian—and on the South the Colony of New South Wales. Its estimated area—exclusive of the islands contiguous to the coast, which, however, belong to Queensland—is about 669,520 square miles, or 428,492,800 acres, being about twelve times the size of England and Wales. REGISTRATION OF BIRTHS, MARRIAGES AND DEATHS.

Every Birth must be registered within sixty days, and every death within thirty days next thereafter respectively; any neglect of this regulation renders the parties whose duty it is to register, liable to a fine not exceeding £10. If sixty days have elapsed from the date of birth, the law requires the parent, or other person making the application, to register such birth, to pay a fee of two shillings and sixpence, and to make a solemn declaration of the facts before a Justice of the Peace, prior to the registration. If possible in all cases the father or mother ought to sign as informant. If unable to write, let a mark be made. No birth can be registered after three years have elapsed from the date thereof; but a record will be made in the Registrar-General's Office if information be supplied respecting such a birth.

Every Minister who has celebrated a marriage, must within one month thereafter, transmit (in accordance with the Act 28 Victoria No. 15) the original certificate to the Registrar of the District in which the marriage was celebrated, and every Minister who fails to transmit the certificate to the District Registrar, is liable to a fine of NOT LESS THAN £10 and not exceeding £50. Marriages must be solemnised between the hours of 8 a.m. and 8 p.m. Persons under age must produce the written authority of parents or guardians, signed by them in the presence of a Justice of the Peace, Registered Minister, or District Registrar, or the marriage cannot take place.

In every case of Burial, the Minister or person officiating at any religious service at such burial, ought to receive from the undertaker or person having charge of the funeral, a certificate from the District Registrar, certifying the registration of the death, unless in the case of inquest, when a certificate from the Coroner or Magistrate holding the inquest, will be sufficient; and if any dead body shall be buried without such certificate, the person who may bury the same, or perform any funeral or religious service for the burial, or who shall in any way dispose of the body, shall forthwith give notice of the facts to the District Registrar. Undertakers are bound, under a penalty not exceeding £10, to lodge with the District Registrar, immediately after the burial, a Certificate of such burial signed by themselves and countersigned by two witnesses.

Correspondence to the United Kingdom from all places south of Mackay is sent by way of Melbourne.

Rates of postage on correspondence for all parts of the world (except the Australian Colonies, New Zealand and Fiji, and places where special foreign transit may be involved,) twopence-halfpenny for every letter not exceeding half ounce in weight.

Unpaid and insufficiently stamped letters will be charged double the deficient postage.

## GENERAL RULES.

Postage Stamps are of the following denominations:—½d., 1d., 2d., 2½d., 4d., 6d., 1s., and 5s.

Inland letters *inadvertently posted*, unstamped or insufficiently stamped, will be forwarded to destination; but before delivery, double the amount of deficient postage must be paid.

Upon receipt of any letter or packet supposed to contain articles liable to Customs duty, a postmaster should advise the person addressed, and the Customs Officer of the fact, and also intimate to the former that he must satisfy the Customs Officer as to the nature of the supposed dutiable articles, and pay any Customs charges before delivery can be made to him.

If there be no invoice or means of satisfying the Customs officer except by examination of the contents, the person to whom it is addressed should authorize the postmaster in writing to deliver it to the Customs officer for that purpose, but should this be objected to, the letter or packet must then be sent to the Dead Letter office.

The transmission by post of gold, silver, precious stones, jewellery, &c., is prohibited in nearly all the countries comprised within the Postal Union.

Letters, packets and newspapers on being *re-directed*, are charged the same amount of postage in addition to the original postage, as would be payable if such letter, packet or newspaper were originally posted at the place of re-direction. This rule does not apply to letters re-directed from place to place within the eight mile radius of the General Post Office; such letters are forwarded uncharged.

Wedding Cake cannot be forwarded, unless it is secured in metal covering, or in such a way that it cannot affect the contents of the mail bag, or attract vermin. Liquid Medicines—not dangerous compounds—may be sent within the colony at letter rate, if packed in such manner as not to cause injury to other mail matter.

A postmaster may refuse to receive or transmit by post, any letter, packet or package of newspapers exceeding sixteen ounces in weight; or of inconvenient form or dimensions, or containing or reasonably suspected to contain, any article likely to injure the other contents of the mail bags or any person.

## PRIVATE LETTER BOXES.

These may be obtained on the following terms:—

Without lock, £1 10s. per annum payable in advance, from the first day of the Quarter in which the box is obtained, until the end of December following, and thereafter yearly.

With lock, £1 10s. per annum, payable in advance, from the first day of the Quarter in which the box is obtained until the end of December following, and thereafter yearly. Two keys will be furnished with each box without extra charge. *Keys must not be obtained elsewhere than from the Department.* In the event of a key being lost, the remaining keys must be returned and information at once be given to the local Postmaster, when a new lock will be fitted in the box, and new keys supplied, for which 7s. 6d. will be charged. It must be fully understood that the boxes mentioned are only let upon the above conditions, and that upon any breach thereof, the Department can at once withdraw permission for the use of the box. On discontinuance of a Lock Box, the keys must be returned by the holder, as they are the property of the Government. Lock boxes are not free to anyone.

## PRIVATE BAGS.

Settlers upon Mail routes requiring the accommodation of a private bag can obtain the same from either of the two Post Offices next to them on payment (in advance) to the Postmaster who makes up the bag a sum at the rate of £2 2s. per annum, from the first day of the Quarter in which the bag is first made up, to the end of December following; and thereafter £2 2s. yearly, subject to the following regulations:—

(1) Should the fee remain unpaid beyond one month, the bag to be discontinued. (2) The bag must be of leather, and provided at the cost of the person requiring it. (3) The Postmaster will close and seal it securely before despatching it; and it must be returned in like manner, sealed with some seal, the impression of which is known by the Postmaster. (4) The bag may contain letters for all persons who give *written authority* to the Postmaster to enclose them. The person paying for the private bags is responsible for the postage of all unpaid letters, and for the receipts of all those which may be registered.

## NEWSPAPERS.

Newspapers not exceeding 4oz. in weight are transmitted within the Colony and to the Australian Colonies free of charge, if posted within seven days of the date of publication; if posted after that period, One Penny each. Newspapers received from beyond the Colony, when re-posted, One Penny; if in monthly parts, One Penny for every number contained therein.

Newspapers to be sent without a cover, or in a cover open at both ends, but without enclosure, mark, or communication, other than the words, "Newspaper only," the printed name, occupation, and address of the publisher or vendor in addition to the name, occupation, and address of the person to whom sent, otherwise they will not be transmitted. Newspapers re-posted in the colony must be prepaid, 1d. each.

Newspapers to the United Kingdom, One Penny each, irrespective of weight, if sent *via* Torres Strait; if sent by other routes One Penny for each (not exceeding 4oz. in weight).

A Newspaper is defined as a paper containing any public news or occurrences, or any remarks or observations thereon, or upon any political matter, or containing only or principally advertisements or trade reports and printed for sale or for gratuitous distribution, periodically published in parts or numbers at intervals not exceeding one month, and not exceeding 4oz. in weight.

A supplement to a newspaper has been thus officially defined:—A publication consisting wholly or in great part of news or reading matter such as that which commonly appears in a newspaper, or of advertisements printed on a sheet or sheets of paper, unstitched; or consisting wholly or in part of engravings, prints or lithographs illustrative of articles published in the same or a previous issue of the newspaper. Such publication must in every case be published with the newspaper, and have the title of the newspaper printed at the top of every page or sheet, and must bear also the date of publication, which must be the same as that of the newspaper with which it is published.

## BOOKS.

**Rate: Inland and Intercolonial, for every 4oz. or fraction thereof, 1d.**

The following and similar articles may be forwarded at Book rates: Printed books, pamphlets, magazines, and reviews, and all wholly printed publications that do not come within the definition of newspapers, printed music, photographs, &c., bound and published in book form. All other articles not coming within the foregoing definition, or within that of newspapers, to be treated as packets. Parcels of Books must not exceed 3lbs in weight, but a single book will be allowed not exceeding 7lbs. No Book to exceed two feet in length, or one foot in breadth or depth, or to be of inconvenient form.

**PREPARATION FOR POST.**—Packets and books may be sent through the post—Without a cover, but not fastened against inspection with anything adhesive, such as gum, postage stamp, sealing wax, &c.; or in a cover open at one end or side, or with the flap left unsealed or *fastened with a binder or in such manner as will permit of opening for examination and re-closure*. If the cover be slit, the opening must be sufficient to admit of the contents being easily withdrawn for examination. Postmasters will, however, satisfy themselves as to the contents without withdrawing them, if possible. The cover may bear the sender's name and address, and with the exception of packets of printed books made up in such a manner as to plainly show contents, the description of contents must be endorsed thereon. Packets and books may be tied with string or tape, but officers of the department may cut the string or tape to examine the contents, but, if they do so, must tie the packet up again. Samples of seeds, drugs, &c., which cannot be sent as open packets, may be enclosed in bags or boxes, fastened so as to be easily undone and re-fastened.

**NOTE.**—If the above conditions are not complied with, the packets will be regarded as insufficiently paid letters, and charged accordingly.

Expenses incurred for portage, cab hire, or boat hire, payable by the receiver, will be charged. Messages addressed beyond the limits of delivery, or which do not contain special directions as to transport, may be posted to their address by the terminal Telegraph Station free of charge. Telegrams will be available for inspection by the sender or receiver at the Brisbane Central Station, or a certified copy thereof obtained, during a period of six months from the date of transmission, on payment of a search fee of 2s. 6d. in each instance. In the event of any interruption to communication by which messages may be unusually delayed, it will be optional with the senders, on application *before transmission*, to withdraw their messages and receive back the amount paid. If desired, messages of consequence can be repeated from stations at which received to stations from which originally sent on payment of an additional half rate; but no responsibility will be undertaken, or any claim for compensation entertained, for any errors or mistakes in transmission, or delay in delivery of messages.

Telegrams to stations within the colony marked "*Urgent*," will be received and transmitted as "*Urgent messages*," and will take precedence of all ordinary messages. Double rates are charged for these messages.

Envelopes containing messages for transmission by Telegraph from any place in Queensland, posted at any Post Office not a Telegraph Office, with the words "*Telegraph Message only*," written thereon above the address, and directed to the nearest Telegraph Office, may be forwarded free of postage; and the officers in charge of the Telegraph Office to which such envelope may be addressed shall transmit the message contained therein to its destination, provided the full fee, either in cash or postage stamps, be also enclosed.

A list of the Telegraph Stations in Queensland will be found in the Postal Gazetteer on page 84.

### TELEPHONE EXCHANGE.

Telephone lines will be erected and kept in order by the Post and Telegraph Department, on payment in advance of an annual rental at the rate of £5 for the first mile or any intermediate distance, and a proportionate rate of 12s. 6d. for every additional quarter mile or fraction thereof.

Instruments must be provided by subscribers, and where connected with Exchanges are maintained in working order by the Department, for which an extra annual charge of £1 for each instrument is made. Maintenance does not include additions or renewals.

### INTERNATIONAL TELEGRAMS.

By the system of registration of name and address, and the adoption of the word scale of charging, the cost of telegraphing between Brisbane (or any other leading town in Queensland) and London, and many of the principal cities of India, China, Japan, Europe, United States, and other countries, has been greatly reduced. It may be necessary to explain that the name and address of the sender and receiver being registered at the points of departure and arrival, a single word, letter, or number serves for their identification.

A record is open at the Brisbane Central Telegraph Office for the registration of the full address, at which foreign telegrams reaching Brisbane and bearing abbreviated or arbitrary addresses are to be delivered. No fee is charged for registration. Application for registration to be made by letter to the Superintendent of Electric Telegraphs. Registration can also be effected and messages sent through Reuter's Telegraph Company.

The Telegraph Companies register names and addresses of telegraph correspondents free of charge at all their stations, and in London at 11 Old Broad-street, 8 Leadenhall-street, and 3 Great Tower-street.

Addresses may also be registered at any Government Telegraph Office in England or Scotland upon the payment of one guinea to the Postmaster-General, London. This registration can be effected only at the telegraph station in the town where the firm is established, and not by letter from Australia to London, or *vice versa* as different firms sometimes select the same code word.

The principal conditions under which messages are transmitted are as follows:—

Words must not exceed ten letters, otherwise they are charged as two words. Groups of figures will be charged at the rate of three to the word. Telegrams may be written in plain language, in code language, or in secret language.

For telegrams, inclusive of name and addresses, from any station in Queensland to places situated in the following countries the price per word is:

## DIRECTIONS FOR MAKING A WILL.

A WILL should be made in the plainest language possible; it must be written with ink on paper or parchment, and must be signed at the end of each sheet (if there be more than one) by the Testator (the person who makes the Will) in the presence of two or more witnesses.

The Witnesses, who must not be in any way beneficially interested in the will, must strictly comply with every particular required by the Attestation clause, at the end of which clause they must sign their names. A witness need not know the contents of the Will, which may be so folded, that the Signature and Attestation clause alone can be seen.

## FORM OF A WILL.

This the last Will and Testament of me (name) of (address) made this day of One thousand eight hundred and ninety as follows. I give, devise, and bequeath all my messuages, lands, tenements, and hereditaments, and all my household furniture, ready money, money secured by life assurance, goods and chattels, and all other my real and personal estate and effects whatsoever, unto my dear wife [or other person as may be] her heirs, executors, administrators, and assigns, to and for her and their own absolute use and benefit, according to the nature and quality thereof respectively, subject only to the payment of my debts, funeral and testamentary expenses, and the charges of proving and registering this my Will. And I appoint my said wife [or other person] executor of this my Will, and hereby revoke all other Wills.

In Witness whereof I have hereunto set my hand this day and year above written.

## ATTESTATION CLAUSE.

Signed, published, and acknowledged by the said as and for his last Will and Testament, in the presence of us, who in his presence and at his request, and in the presence of each other, have subscribed our names as witnesses.

## A CODICIL TO A WILL.

A Codicil is to be made with the same regulations as the Will itself, and may be written thus.—This is a Codicil to my last will and Testament, bearing date the day of 189 and which I direct to be taken as part thereof. I give, devise, and bequeath, &c. As witness my hand this day of 189

NOTE.—Obliterations and alterations of any sort in the Will ought, if possible, to be avoided; when they have to be made, they must be signed or initialled by the Testator and witnesses on the margin, or as near to the alteration as possible.

NOTE.—Marriage after making a Will renders the Will void.

If a witness be interested in the Will the claim to such interest becomes forfeited.

If a person wishes to dispose of all his property in one gift, the words, "all my real and personal estate," may be used.

Personal property left without a Will, is devisable as under:—If the deceased should leave Children and no Widow, the whole property is to be divided equally among the Children. If he leave a Widow and Child or Children, the former is entitled to one-third and the latter to the remaining two-thirds. If he leave a Widow and no Child, the former is entitled to half, and the next of Kin the remainder, as follows:—A Father, the whole amount; if no Father, a Mother, Brothers or Sisters, or their issue, equal portions; if none, then Uncles, Aunts, Nephews, and Nieces, equal portions.
